# Email Signature Generator

HTML - JavaScript

Scope

- Single page email generator will be developed.
- HTML email signature will be generated with the text input collected from the fields on the same page.
- Final signature output would be copiable.

Example: https://codepen.io/svyatoff/full/wdRzWw

Mapping

- Fields on the left, generated signature on the right.

Notes

- HTML file is ready with comments.
- JavaScript must be as light as possible.
- Fields and generated file better to appear on the same page.
- Phone link would be visible if the checkbox is clicked and data is filled.
- Phone link is in <a href="tel:...> format (spaces to be omitted)
- Email link is in <a href="mailto:...> format (mail format to be checked)
- A "copy to clipboard" button is required.
